THE MANAGEMENT OF DIFFICULT BILIARY STRICTURE
Case Report

• A 49 years old man was admitted for jaundice and recurrent abdominal pain.
• Blood tests showed a total bilirubin 100 (direct in majority), GGT 10N with normal lipasemia
• CT Scan showed a prominent head of the pancreas with calcifications and dilated common bile duct with intrahepatic bile ducts.
ERCP

Many tentative failed to access to the common bile duct because of the presence of a cyst in the duodenum
WHAT IS YOUR NEXT STEP TO ACCESS TO THE BILIARY TREE?

• ENDOSCOPY?
• RADIOLOGY?
• SURGERY?
